DIGITAL LITERACY PROJECT REPORT

Title Page

Name: Varun Sharma
Registration Number: (25BCY10239)
Branch: B.Tech CSE (Cyber Security & Digital Forensics)
Year: First Year
Course Code: CSE0001
Date: (31/03/2026)

Introduction

This project is based on the role of a Student Digital Ambassador, where I explored various aspects of digital literacy and its importance in today's world. The objective of this project was to understand how digital tools, online platforms, and safe internet practices can help students in their academic and professional growth.

Through this project, I worked on creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, learning email etiquette, and understanding cybercrime awareness. This project helped me improve my technical skills and develop a better understanding of responsible digital behavior.

Task 1 – Infographic

For this task, I created a digital literacy awareness infographic using Canva. The infographic highlights key topics such as the meaning of digital literacy, useful digital tools for students, safe internet practices, professional online presence, and email etiquette.

While designing the infographic, I focused on making it visually appealing and easy to understand. I used icons, short points, and proper color combinations to present the information clearly. One challenge I faced was organizing all the information in a single page without making it look crowded. However, this task helped me improve my creativity and design skills.

Task 2 – Digital Portfolio

In this task, I created and updated my profiles on platforms such as GitHub, LinkedIn, and HackerRank. GitHub is used for storing and sharing coding projects, LinkedIn helps in building a professional network, and HackerRank is useful for practicing coding skills.

I also created a GitHub profile README that includes my basic details and learning goals. These platforms will help me build my digital presence and improve my skills over the next four years. I plan to regularly update my profiles, participate in coding challenges, and connect with professionals in my field.

Task 3 – Platforms

For this task, I explored coding and collaboration platforms. I used HackerRank to solve beginner-level programming problems such as "Hello World" and "Arithmetic Operators." This helped me understand basic programming logic and improve my problem-solving skills.

I also created a Google Form titled "Digital Literacy Awareness Quiz" with five questions. The form was linked to a Google Sheet to collect responses. These tools are useful for collaboration, data

collection, and academic activities. This task helped me understand how digital platforms can be used effectively for learning and interaction.

Task 4 – Email Etiquette

In this task, I learned how to write professional emails and maintain proper communication online. I wrote two emails: one requesting an assignment extension and another applying for an internship. Both emails followed proper structure, including subject line, greeting, body, and closing.

I also created a social media checklist with do's and don'ts. Poor digital communication can lead to misunderstandings or missed opportunities. For example, sending an email without a proper subject or using informal language may create a negative impression. This task helped me understand the importance of professional communication.

Task 5 – Cybercrime Awareness

For this task, I studied phishing as a common cybercrime. I learned how attackers trick users into sharing sensitive information through fake emails or websites. What surprised me most is how easily people can become victims if they are not careful.

As a result, I will be more cautious while clicking links and sharing personal information online. I will also use strong passwords and enable security features like two-factor authentication to protect my accounts.

Conclusion

This project helped me understand the importance of digital literacy in today's world. I learned how to use digital tools, build a professional online presence, communicate effectively, and stay safe online. These skills will be very useful for my academic journey and future career.
